FILTER DRYER FOR TESLA IN THE SERVICE KIT

Filter dryer with accessories (item no. 7.14833.00.0) for Tesla

Installation situation in the supermanifold in the Model 3

Motorservice has a service kit consisting of a filter dryer and accessories (item no. 7.14833.00.0, OE reference 1597579-A0-A) for Tesla's refrigerant circuit is included in its aftermarket range. With the filter dryer, Motorservice covers more than 3.7 million vehicles from the electric vehicle manufacturer worldwide.

The service kit is suitable for the following models:

- Model 3 (from 06/2017)
- Model Y (from 01/2020)
- Model S (from 02/2021)
- Model X (from 03/2021)

The filter dryer from Pierburg boasts impressively high-quality filter media and meets all OE specifications.

In the case of filter dryers, high quality is extremely important, as this is the only way to ensure that the refrigerant is reliably filtered. The filter dryer should therefore be replaced regularly. It removes contaminants and moisture from the entire refrigerant circuit, which would otherwise lead to corrosion and other damage.

Even when a new air-conditioning compressor is being installed, all non-flushable parts should be replaced to remove as many contaminants as possible from the refrigerant circuit, including the filter dryer.

NOTE

It is essential to follow the instructions of the vehicle manufacturer when installing the vehicle.
