

NEW PRODUCT HIGHLIGHT | JAN2019

Blue Print ADN16143

to fit:
Dacia, Nissan and Renault 1.5dCi engine

various models

EN

ENGINE OIL COOLER

Function

To assist the cooling of the engine oil.

Failure

O-ring seals – can harden and crack over time and leak engine oil or coolant.
Internal failure, possible caused by corrosion due to incorrect coolant servicing or incorrect coolant type being used.

Oil mixed with the coolant – if the oil cooler fails internally, traces of oil will be found in the coolant, oil is forced into the cooling system due to being a higher pressure than the cooling system, when the engine is running.

Coolant mixed in the engine oil – once the engine is switched off, the cooling system is still under pressure, coolant can be forced into the engine oil.
